DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 4-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 2, there is no antecedent basis for “the inter-conductor spacing.”

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okada et al. [US 6,420,941] in view of Umebayashi [JP 11-068412].

Okada et al. discloses a communication device including a nonreciprocal circuit element [figures 1] comprising:

- a magnetic body [12] having a rectangular parallelepiped shaped;
- three center conductors [13-15] arranged to intersect one another at a predetermined angle, provided in an electrical insulated state from one another, and one of which disposed substantially parallel with one side of the magnetic body; and

Art Unit: 2832

- a terminating resistor [R, figure 7] connected to a port of one of the three conductors.

wherein each of the three conductors includes two conductors.

Okada et al. discloses the instant claimed invention except for a conductor spacing of the center conductor which disposed parallel with one side of the magnetic body is set be wider than that of the two other center conductors.

Umebayashi discloses a nonreciprocal circuit element [figure 1] comprising:

- a magnetic body [4];
- three center conductors [51-53] formed on the magnetic body; and
- a resistor [R].

wherein a conductor spacing [Wk] of the center conductor [53] is set to be wider than that of the other two conductors [51-52].

It would have been obvious to one having ordinary skilled in the art at the time the invention was made to use the conductor spacing design of Umebayashi in Okada et al., for the purpose of reducing the size of the device.
